2 **CLAIM AMENDMENTS**

3 Please amend the claims as follows in accordance with the Revised Format  
4 of Amendments under 37 C.F.R. § 1.121.

5 1. (currently amended) A network addressable device in a communications  
6 network for use with a network addressable printer object, the network  
7 addressable device comprising:  
8 (a) a document storage assembly; and  
9 (b) a universal remote interface assembly linked to the document  
10 storage assembly and via the network, to the network addressable printer object  
11 wherein the universal remote interface assembly receives from a remote  
12 communications device a document command for accessing the document  
13 storage assembly and identifying a particular stored document and for identifying  
14 a particular network addressable printer object and transmitting a print job for the  
15 particular stored document and print job command to the particular network  
16 addressable printer object.

17

18 2.(canceled)

19

20 3. (currently amended) The network addressable device according to claim 1  
21 wherein the universal remote interface assembly provides remote access and  
22 printing of documents on the network addressable printer object upon receipt of a  
23 document contact card.

24

25 4. (original) The network addressable device according to claim 1 wherein the  
26 universal remote interface assembly includes:

27 (a) a request interface.

28

29

30 5. (original) The network addressable device according to claim 4 wherein the  
31 request interface comprises a Simple Mail Transfer Protocol server.

32

33 6.(canceled)

1

2 7. (original) The network addressable device according to claim 1 wherein the  
3 universal remote interface assembly includes:

4 (a) a document provider.

5

6

7 8. (original) The network addressable device according to claim 7 wherein the  
8 document provider renders a document.

9

10 9. (currently amended) The network addressable device according to claim 7  
11 wherein the document provider transmits the document from the network  
12 addressable device to the network addressable printer object.

13

14 10. (original) The network addressable device according to claim 4 wherein the  
15 document storage assembly includes:

16 (a) a document indexing engine linked with the request  
17 interface.

18

19

20 11. (original) The network addressable device according to claim 10 wherein the  
21 document indexing engine synchronizes a document.

22

23 12. (original) The network addressable device according to claim 10 wherein the  
24 document indexing engine generates a contents index based on the document  
25 command.

26

27 13. (original) The network addressable device according to claim 7 wherein the  
28 document storage assembly includes a document repository linked with the  
29 document provider.

30

31 14. (original) The network addressable device according to claim 13 wherein the  
32 document repository stores a document.

33

1 15. (original) The network addressable device according to claim 13 wherein the  
2 document repository sends a document to the document provider.

3

4 16. (currently amended) Computer code on computer readable media for  
5 facilitating remote access and printing of documents on a printer object included in  
6 a communications network, the computer code product comprising:

7 (a) a document storage assembly computer code for archiving a  
8 document; and  
9 (b) a universal remote interface assembly computer code for remotely  
10 accessing via the network and printing the document on the printer object  
11 wherein the universal remote interface assembly computer code receives from a  
12 remote communications device a document command for accessing the document  
13 storage assembly and identifying a particular stored document and for identifying  
14 a particular network addressable printer object and for transmitting a print job for  
15 the particular stored document and print job command to the particular network  
16 addressable printer object.

17

18 17. (original) The computer code according to claim 16 wherein the universal  
19 remote interface assembly computer code product includes a request interface  
20 code product for receiving a document command according to Simple Mail  
21 Transfer Protocol.

22

23 18. (currently amended) In an communications network, a method for remotely  
24 accessing and printing of documents on a printer object, comprising the steps of:

25 (a) linking a universal remote interface assembly with a document  
26 storage assembly;  
27 (b) remotely accessing the universal remote interface assembly via a  
28 document command wherein the universal remote interface assembly receives  
29 from a remote communications device a document command for accessing the  
30 document storage assembly and identifying a particular stored document and for  
31 identifying a particular network addressable printer object and transmitting a print  
32 job for the particular stored document and print job command to the particular  
33 network addressable printer object.

1 ; and

2 (c) remotely transmitting a document from the universal remote  
3 interface assembly via the network to a network addressable  
4 printer object based on the document command.

5

6 19. (original) The method according to claim 18 wherein the step of remotely  
7 accessing the universal remote interface assembly includes the step of receiving  
8 the document command according to Simple Mail Transfer Protocol.

9

10 20. (currently amended) The method according to claim 19 wherein the step of  
11 remotely transmitting a document from the universal remote interface assembly  
12 includes the step of transmitting the document from the network addressable  
13 device to the network addressable printer object in a network addressable  
14 protocol.

15
